

To Whom it May Concern

Date: 17th December 2013

Subject: Reference letter of Vincenzo Milanese

In 2011 my company won the contract for the architectural design of the new "Palalido" in Milan. Palalido will be a multifunctional stadium to be used for public events and for the games of basketball Italian first league.

Being very interested in acoustic design, in June 2011 Mr. Milanese proposed the characterization the acoustic properties of the interior of the stadium as main subject of his Bachelor's thesis. From June to December 2011 he worked on this subject under the academic supervision of Prof. Tronchin while my team provided him all the necessary tools and expertise.

The main outcomes of his work have been two executive proposals for the improvement of the acoustic properties of the stadium.

We had several work meetings during which I found Mr. Milanese to be enthusiastic, professional, very well prepared on the subject and excellent in team work. Therefore I would recommend him as a good candidate for your open position.

For any questions on the qualifications of Mr. Milanese, please feel free to contact me.

Sincerely,

Ing Carlo Rotellini
